4030 Esch Sur Alzette,  
Luxembourg

Dear Hiring Manager,

I am writing to submit my application for the Senior Full Stack Developer position. With 15 years of experience delivering complex web and cloud-based solutions across banking, insurance, healthcare, and ecommerce, I bring a strong track record in Ruby on Rails, Python, Django, ReactJS, and modern API development.

In my current role at Tata Consultancy Services in Luxembourg, I develop banking solutions for CACEIS Bank using Ruby on Rails, Python, ReactJS, FAST APIs, and Oracle. I recently modernized a legacy Rails application from version 3.x to 6.x, reducing query processing time by 30% and improving customer satisfaction scores by 15%. I also designed and delivered an Access Review Tool (Django + ReactJS) that automated workflows and reduced manual effort by 70%.

Previously, I led development for financial services clients such as RBC Bank and Liberty Mutual, improving application performance by 30% and integrating multiple third-party APIs and reporting tools. I regularly lead Agile teams and use RSpec and Pytest to ensure maintainable, testable code.

Thank you for your consideration. I would welcome the opportunity to contribute to your engineering team.

Sincerely,  
Srinivasan Irulappan
